BRANDCRAFT: GENERATIVE AI-POWERED BRANDING AUTOMATION SYSTEM

Abstract:

BrandCraft: Generative AI-Powered Branding Automation System is a cloud-oriented Generative AI platform designed to simplify and automate the branding process for businesses, startups, and entrepreneurs. Traditional branding often requires multiple disconnected tools and professionals for strategy, design, content creation, and marketing, making the process time-consuming, costly, and inconsistent. The objective of BrandCraft is to provide an integrated platform that converts a business idea, industry, target audience, brand values, and design preferences into a consistent and reusable brand identity. The proposed system uses an interactive AI-guided workflow and multi-agent AI orchestration, where specialized agents such as Brand Strategist, Designer, Copywriter, Marketing, Campaign, and Social Media agents collaboratively generate brand personality, color palettes, typography, logo concepts, marketing content, campaign materials, and social media content. A centralized Brand Asset Repository maintains brand context and generated assets, while Retrieval-Augmented Generation (RAG) supports contextual and knowledge-based outputs. The platform also includes collaboration, workflow automation, analytics, integrations, and administrative management features. For scalability and reliable background processing, the system is designed for cloud-oriented deployment using Docker, Celery, and Redis. The expected outcome is a scalable end-to-end branding automation platform that improves efficiency, consistency, and accessibility of professional branding. The project supports **SDG 8 (Decent Work and Economic Growth)** by helping entrepreneurs improve productivity, **SDG 9 (Industry, Innovation and Infrastructure)** through Generative AI and cloud-based digital infrastructure, and **SDG 12 (Responsible Consumption and Production)** by reducing repetitive manual resources through automated digital workflows.

Keywords: Generative AI, Multi-Agent Orchestration, Branding Automation, Retrieval-Augmented Generation (RAG), Cloud Computing, Marketing Automation

Supervisor Approval

I hereby approve the above abstract for Mini Project development.
