FINANCEPILOT: GENERATIVE AI–POWERED PERSONAL FINANCIAL ADVISORY PLATFORM

Abstract:

FinancePilot is a Generative AI-powered personal financial advisory platform designed to help individuals manage their money in a simple and effective way. Many people face difficulties in managing income, expenses, savings, investments, and future financial needs because they may not have enough financial knowledge or access to personal guidance. FinancePilot addresses this problem by using Generative AI to provide personalized financial suggestions based on the user's income, expenses, spending habits, and financial goals. It can analyze spending patterns, identify unnecessary expenses, suggest suitable budgets, and provide recommendations to improve savings. It can also help users plan financial goals such as building an emergency fund, saving for education, purchasing a vehicle, or preparing for future expenses. By providing personalized and accessible guidance, FinancePilot aims to improve financial awareness and encourage responsible money-management habits.The project also supports several United Nations Sustainable Development Goals (SDGs). It contributes to SDG 1 (No Poverty) by encouraging better financial management, SDG 4 (Quality Education) by promoting financial literacy, and SDG 8 (Decent Work and Economic Growth) by supporting financial stability and responsible economic decisions. It supports SDG 9 (Industry, Innovation and Infrastructure) through the use of Generative AI technology and contributes to SDG 10 (Reduced Inequalities) by making financial guidance more accessible to people from different backgrounds. Overall, FinancePilot aims to make personal financial planning easier, smarter, and more accessible through AI.

Keywords: Generative AI, Personal Finance, Financial Advisory, Financial Planning, Investment Planning, Expense Tracking, Expense Analysis, Budget Management.

Supervisor Approval

I hereby approve the above abstract for Mini Project development.
